

September 2008

Hello everyone and welcome to Septembers monthly report. I hope you all find yourselves well, and aren't bugged down by the terrible flu that's going around. As we do draw into the autumn/winter months we find ourselves at Weirfield getting quite quiet and the amount of animals coming into us decreases dramatically. This gives us chance to start working on our projects that are usually on going at the hospital, such as, the education shed, isolation area and the swan pool, of which we still need materials to help with the construction of these projects. If you do happen to have any slabs, concrete blocks or any other building materials that you are looking at 'getting rid of' please do get in touch with us we could really do with the help! Contact details at the bottom of the page.

Also this month we went to the British Wildlife Rehabilitation Council (BWRC) meeting where we were able to come together with people from as far as Holland who came to talk about the rescues and rehabilitations that they are doing. They were also able to offer advice on the most complex diseases and problems that we at the hospital may encounter on a weekly basis at the hospital.

### **Volunteers**

At this moment in time we do have a lot of request for volunteering placements. Due to our high demand we have had to put people on to a waiting list therefore some people may not get contacted as quick as what as they expected. Please bear with us and we are going to try our best to get people volunteering as soon as possible.

### **Events**

At this moment in time we do not have any events coming up in October but this does not mean we are stood still, we are still doing talks mostly every week and we have already started booking them in for next year!

Well I'm afraid that is it from me, I apologise for this being a short report but I look forward to writing to you all next month. Below are the details for the hospital:

Weirfield Wildlife Hospital, 27 Rookery Lane, Lincoln. Ln6 7px. 01522 530428
